

We are a young and fast growing startup from Cologne, Germany. We develop a software platform for the digitalization of energy grids. For our team in Cologne we are looking for a

Software Engineer Frontend (m/f)

Your tasks

- Development and implementation of new features for the web-based user interface of our software solution Intelligent Grid Platform
- Conception of intuitive user interfaces
- Close collaboration with the design team and the backend development team

Your skills and expertise

- University degree in computer science or comparable education
- Strong knowledge in frontend development (HTML5, CSS3, Angular) and ideally practical experience in this field
- Experience in Django web framework or comparable software
- Knowledge of agile software development is an advantage
- Interest in web-based technologies

What we are offering

- A very good salary for a challenging and independent work
- The opportunity to work for a tech start-up shaping the energy transition
- Flexible working hours, free drinks and a young team with a high motivation
